

# AIRY

The Airy sofa with an ottoman is an enhanced version of the original model.

They say that “the best” is the enemy of “good,” but we’re ready to argue that when it comes to an even more comfortable version of Airy — a sofa with an ottoman, we have enhanced this model and achieved an impressive result.

The transformation mechanism is reliable and easy to operate.

Transformation  
mechanism

Thanks to a thin metal-frame structure, we've been able to conceal the transformation mechanism entirely under the seat. The cushion transformation mechanism is inertia-free, with a locking system at the final position. The cushions are filled with two layers of shaped polyurethane foam of varying softness. To transform

into sleep mode, the seat can be pushed forward with a gentle movement and rests on the floor with its feet. The mattress, consisting of a low resilience polyurethane foam on the bottom and ultra-soft "Soft Foam" on the top, will allow you to sleep in a free and natural way.

# AIRY

Configuration of the Airy corner sofa, changes in overall dimensions:
