Designations of modules and configuration elements

BP — basic configuration of sofas and modules without cushions.

All cushions for sofas and modules are calculated separately.

K1 — sofa in one color.

All upholstery is made from a single fabric selected from the fabric category specified for the model.

K2 — sofa with a frame in a different color.

The seat and frame are upholstered with fabrics of different colors from the available palette.

The fabric category specifies:

available upholstery options for the frame.

It is possible to choose any fabric outside the specified list.

If the selected fabric exceeds the category of the main sofa fabric, the cost of the entire sofa is calculated according to the higher fabric category.

Modules with a transformation mechanism for everyday use

1MrL — extended Long module based on 1Mr, single-seater section with a transformation mechanism.

Seat width: 1070 mm.

1Mr — single-seater module/section with a transformation mechanism.

Seat width: 770 mm.

2Mr — two-seater module/section with a transformation mechanism.

Seat width: 1570 mm.

Armrests

PLM / PPM — soft left / right armrest.

stp./stl./st. — standard configuration, from which all other modifications are calculated (taking into account changes in module sizes).

comp. — configuration taking into account changes in module sizes.

Individual size changes $L \pm$ — increase or decrease in the length of the sleeping or seating area (in mm). $B \pm$ — decrease in the depth of the sofa, seating or sleeping area (in mm).
